

Validation & Error Report

Review date: 10 October 2026

Official EPUBCheck 5.4.0 and an independent XML/package audit were completed on all four distributed EPUBs. New specialist samples extend the retained reflowable and fixed-layout portfolio.

Sample	EPUBCheck	References / IDs
Reflowable EPUB	0 fatals / errors / warnings / infos	46 local references; 0 broken targets; 0 duplicate IDs
Fixed-layout EPUB	0 fatals / errors / warnings / infos	25 local references; 0 broken targets; 0 duplicate IDs
Accessible EPUB sample	0 fatals / errors / warnings / infos	40 local references; 0 broken targets; 0 duplicate IDs
MathML EPUB sample	0 fatals / errors / warnings / infos	43 local references; 0 broken targets; 0 duplicate IDs

Verified totals

154 local references checked. New specialist books each contain chapters 1-4 and five live email links. The MathML sample contains nine native equations in three XHTML resources, each with alternative text and an explanation.

Resolved and retained changes

The original reflowable index order, removed visible project ID, workflow spacing, refreshed covers and contact details are retained. Original EPUB hashes are unchanged. New samples have semantic chapter structure, metadata and valid navigation. Navigation-label and equation-caption validation findings were resolved before the final checks.

Remaining acceptance work

DAISY ACE, screen-reader tests and reading-system rendering were not performed. Equation rendering and mathematical speech still require target-system testing. No accessibility certification or WCAG conformance is claimed. The issue log records this remaining work separately from validator errors.

Content and source scope

The two new books contain original educational demonstration content; no source PDF was supplied for them. The retained reflowable book is an expanded portfolio edition with known differences from its prior reference PDF, detailed in its QC report. Fixed-layout geometry and the LIVE centering correction are retained. New vector covers were rendered and visually inspected; this is separate from reading-system testing of the EPUBs.

Package contents

Four EPUB files; company profile; four QC PDFs; this summary in PDF, TXT and JSON; four raw EPUBCheck logs; issue log; linked equation inventory; and delivery instructions. Reports distinguish structural findings from the tests still required for client acceptance.

Before client acceptance

Open the final files in the client-selected reading systems, confirm visual and assistive-technology behavior, run the required accessibility toolchain and check customer-specific rules. Agree any corrections before acceptance.
